Endusers Group

- The Endusers Group provides a forum to promote recognition of the Enduser's needs, information exchange, and lessons learned in criticality safety operations support. An Enduser is loosely defined as a criticality safety professional that is tasked with day-to-day criticality safety support to a nuclear facility. The Enduser Group is made up from managers and/or technical points of contact from each DOE site or operation.
- Todd Taylor (INL) is the current Chairman. Past Chairman of the Endusers Group are John Pearson (LLNL) - Shean Monahan (LANL) - Chris Robinson (Y12) - Marc Rosser (WSMS) - Hans Toffer (Hanford) - Kevin Carroll (Y-12), and Song Huang (LLNL). Please feel free to contact them regarding issues of concern or questions.

Endusers Group Charter

- To exchange criticality safety operations support information and experience to strengthen DOE criticality safety programs across the complex.
- To document Enduser concerns and issues as a group rather than as individual sites or contractors.
- To provide criticality safety peer support such as criticality safety evaluations, information, technical support and independent assessments.
- To review Orders, Guides, standards, handbooks, computer software applications, and criticality benchmark experiment needs from the Enduser perspective.
- To hold meetings as required to identify the Enduser needs and to promote criticality safety and technology development to meet such needs.

Endusers Group Steering Committee

- The Steering Committee discusses Enduser Group direction and needs. Members of this committee consist of current and past chairs.

Endusers Group Membership Roster:

DOE Site	Contact	Phone	Fax	E-mail
