

FAST NEUTRON EVALUATIONS FOR ADVANCED LEAD SYSTEMS

Peter Brain, Yaron Danon | Rensselaer Polytechnic Institute

D. Brown | Brookhaven National Laboratory

D. Barry, A. Lewis | Naval Nuclear Laboratory

T. Kawano | Los Alamos National Laboratory

NCSP TPR 2023 | Albuquerque, NM

Work supported by DOE-NEUP | Project Number: 19-16739.

Rensselaer

PROJECT OVERVIEW

■ Motivation

- Hydromine and Westinghouse are developing Lead Fast Reactors (LFR) as a part of GEN IV reactors
- In Belgium, MYRRHA, a Pb-Bi cooled accelerator driven system (ADS) being designed for T&H validation
- Niowave - Pb cooled fast spectrum testbed
- DOE-NEUP supporting LFR development through material and cross section validation

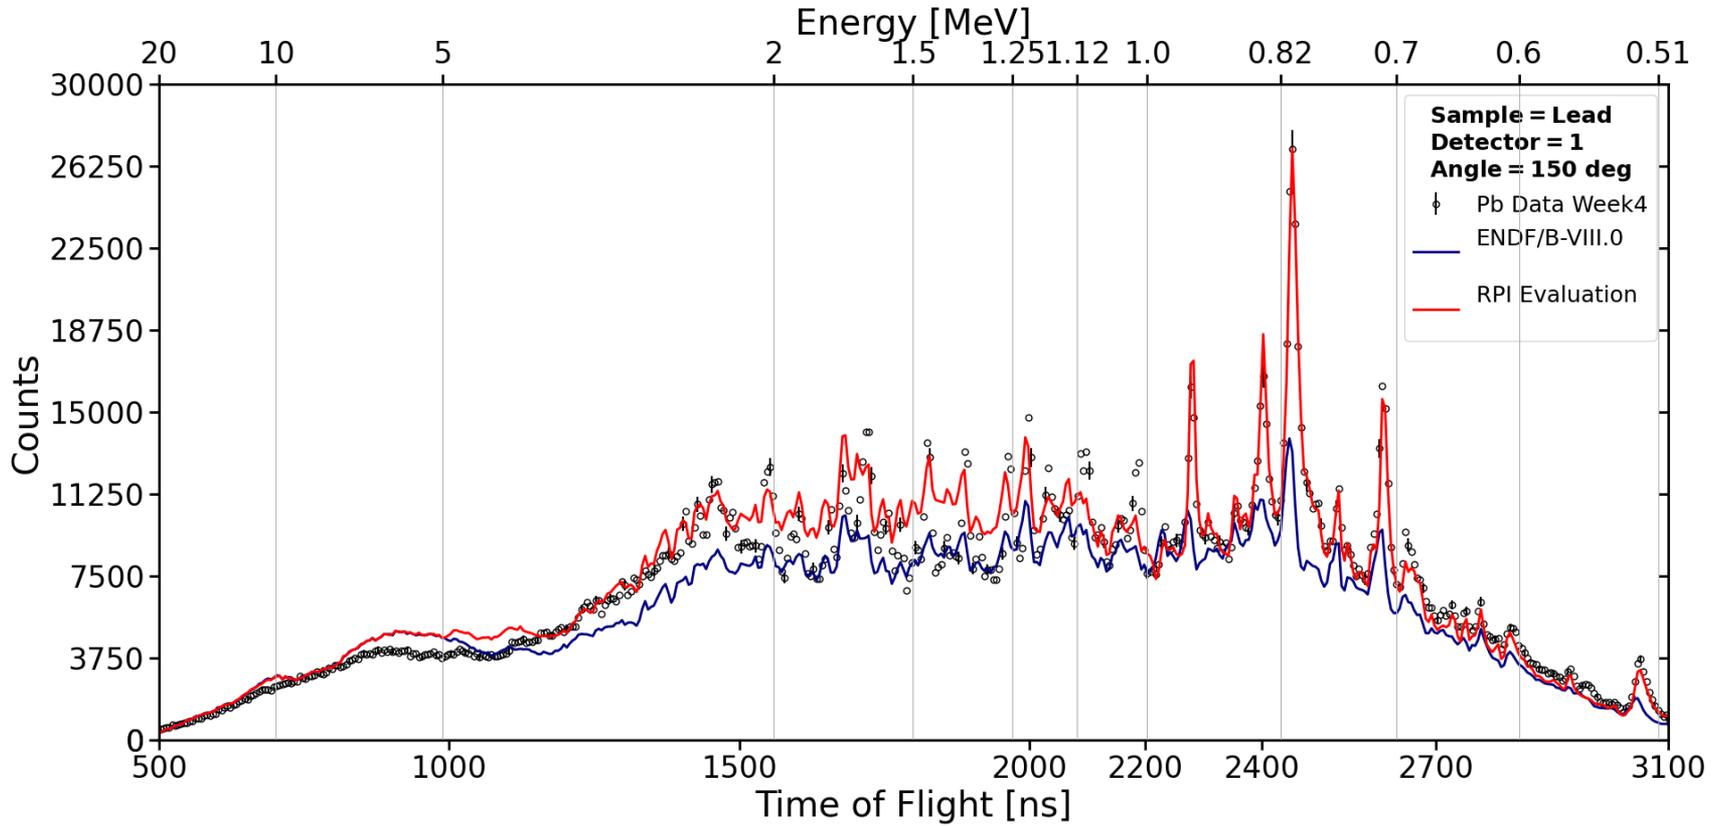

■ Project Goals

- Evaluate Pb isotopes with focus of improving predictive capabilities of fast systems
- Benchmark available critical and shielding experiments with sensitivity to Pb
- Utilize RPI Quasi-Differential Scattering experiment for scattering reactions
- Performed Resolved Resonance Region (RRR) and fast region evaluations for natural Pb isotopes with differential data on EXFOR
- Submit evaluations to ENDF/B-VIII.1 library

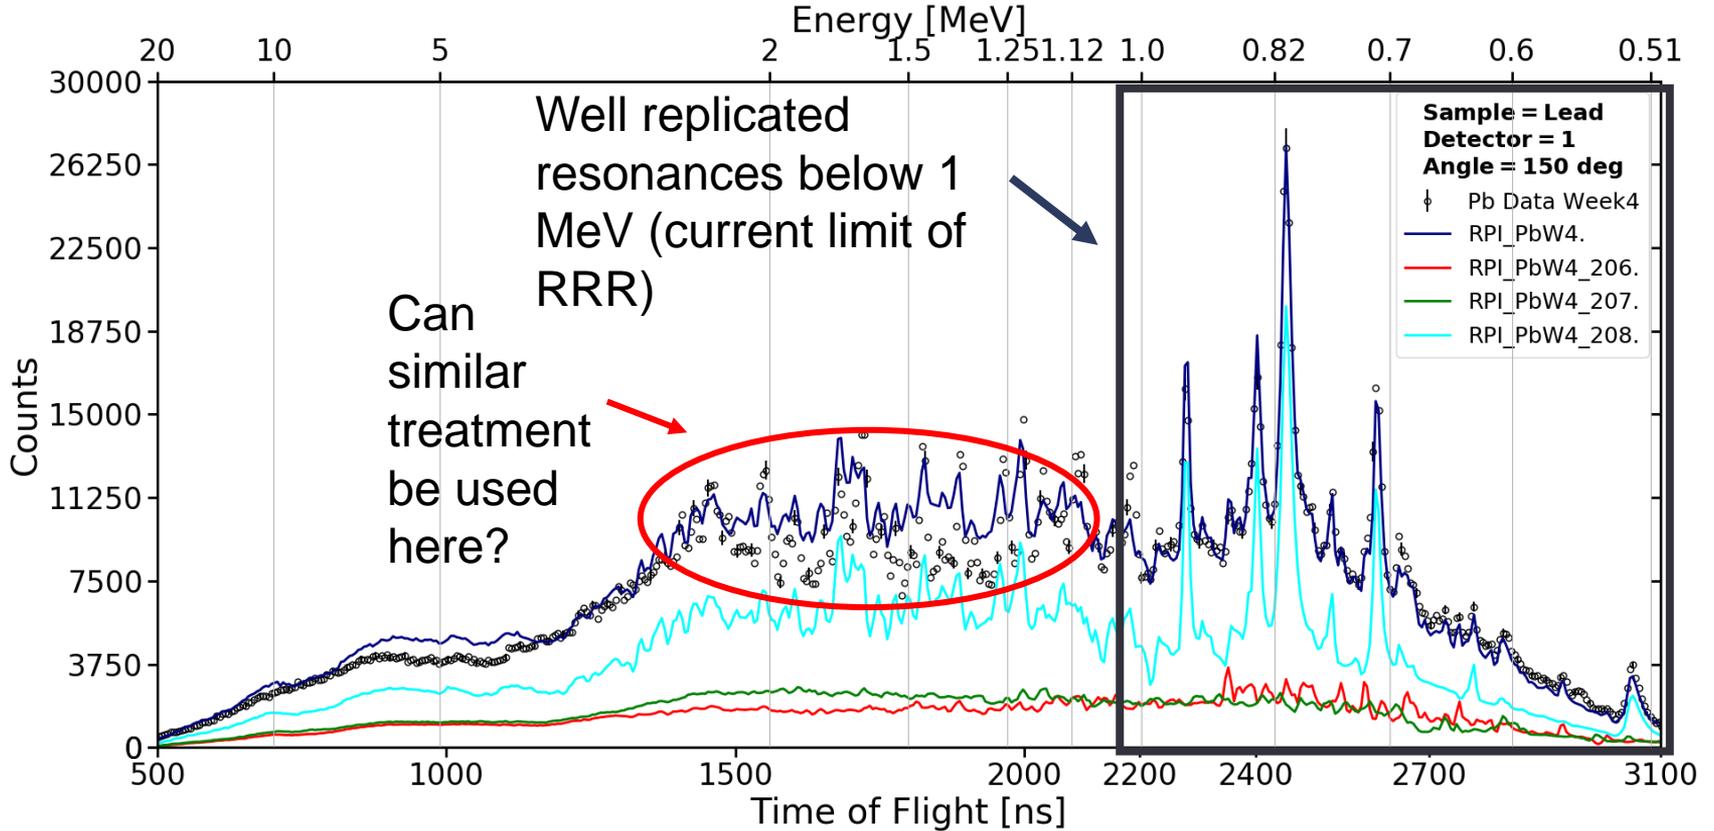

MAJOR ACCOMPLISHMENTS

- Performed pre-validation and pre-evaluation for natural lead (FY20)
 - All evaluations fit ORELA (n,tot) measurements by D.J. Horen, J. Harvey, and R. Carlton – Same total cross sections for JEFF-3.3, JENDL-5.0 and ENDF/B-8.0
 - Elastic Scattering Angular Distributions deemed to be largest difference in libraries, quasi-differential scattering, critical benchmarks
- RRR Evaluations (FY21)
 - Update resonance parameters with most current capture data
 - Use new resonance parameters to calculate ESAD with Blatt-Biedenharn Formalism
- Fast Region Evaluations (FY22+)
 - Extended the RRR of Pb-208 and fast region evaluations of Pb-208
 - Fast region evaluations of Pb-206 cross section
 - Covariance development

Once the RRR was done for Pb-206/7/8, NJOY16 used to recalculate ESAD

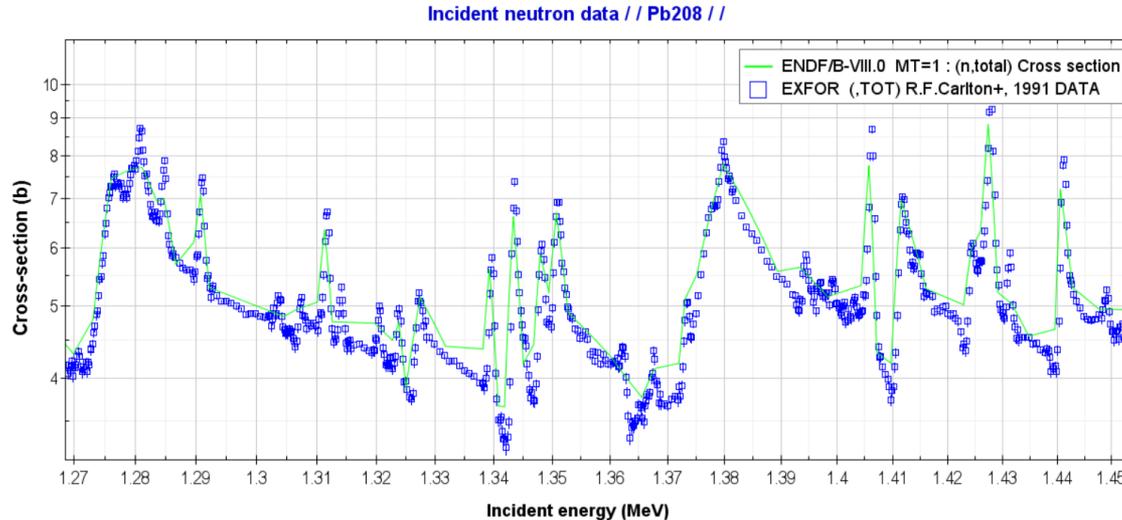

ANALYZED ISOTOPIC SCATTERING CONTRIBUTIONS

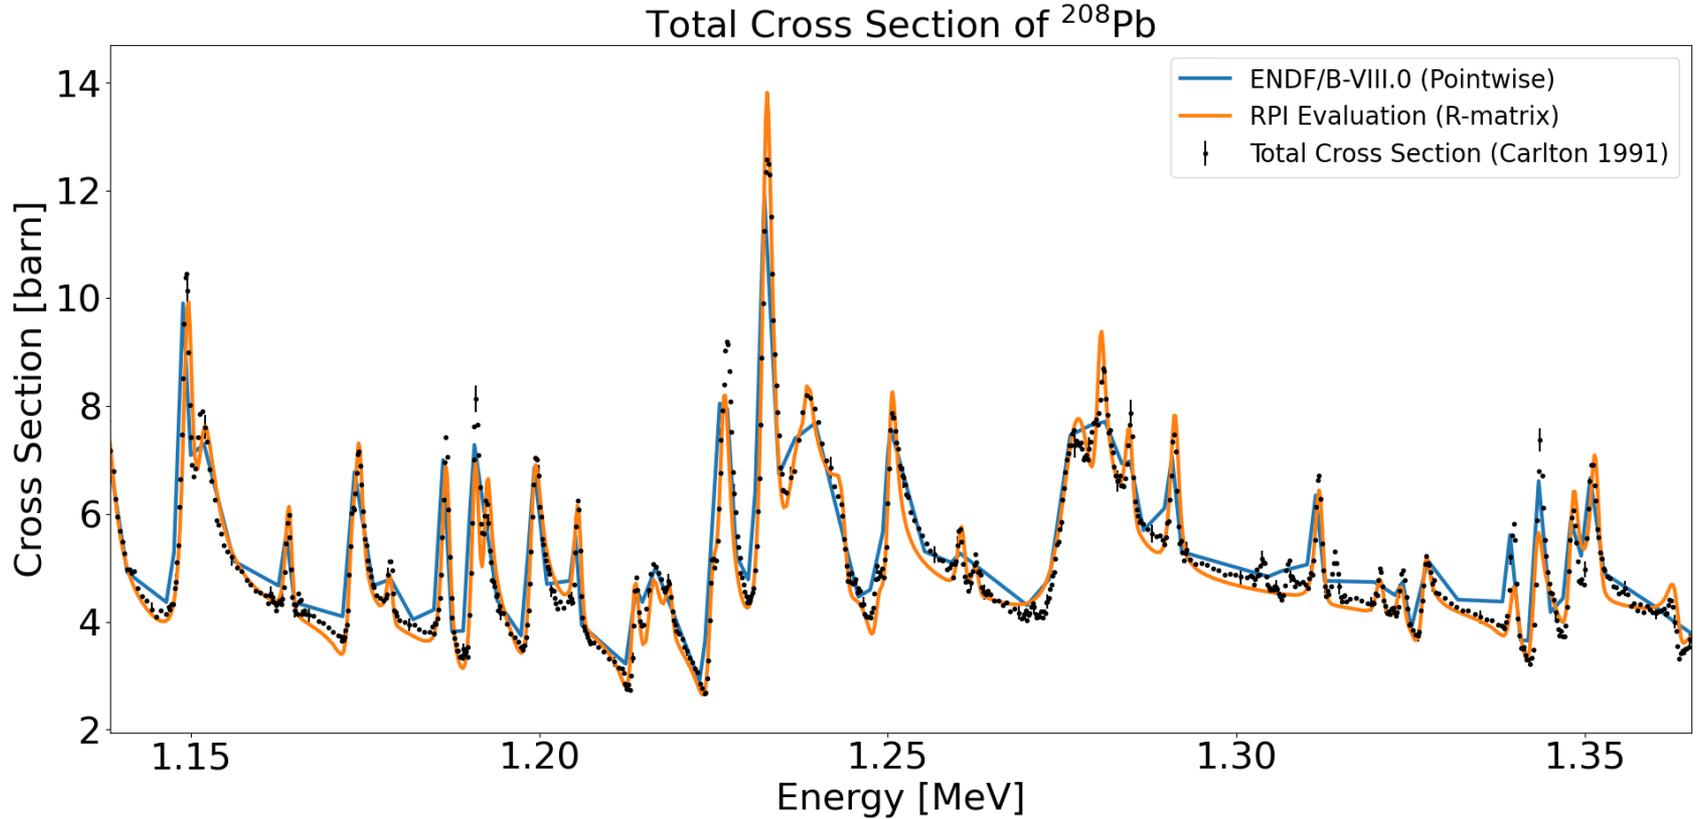

Pb-208 RRR EXTENSION

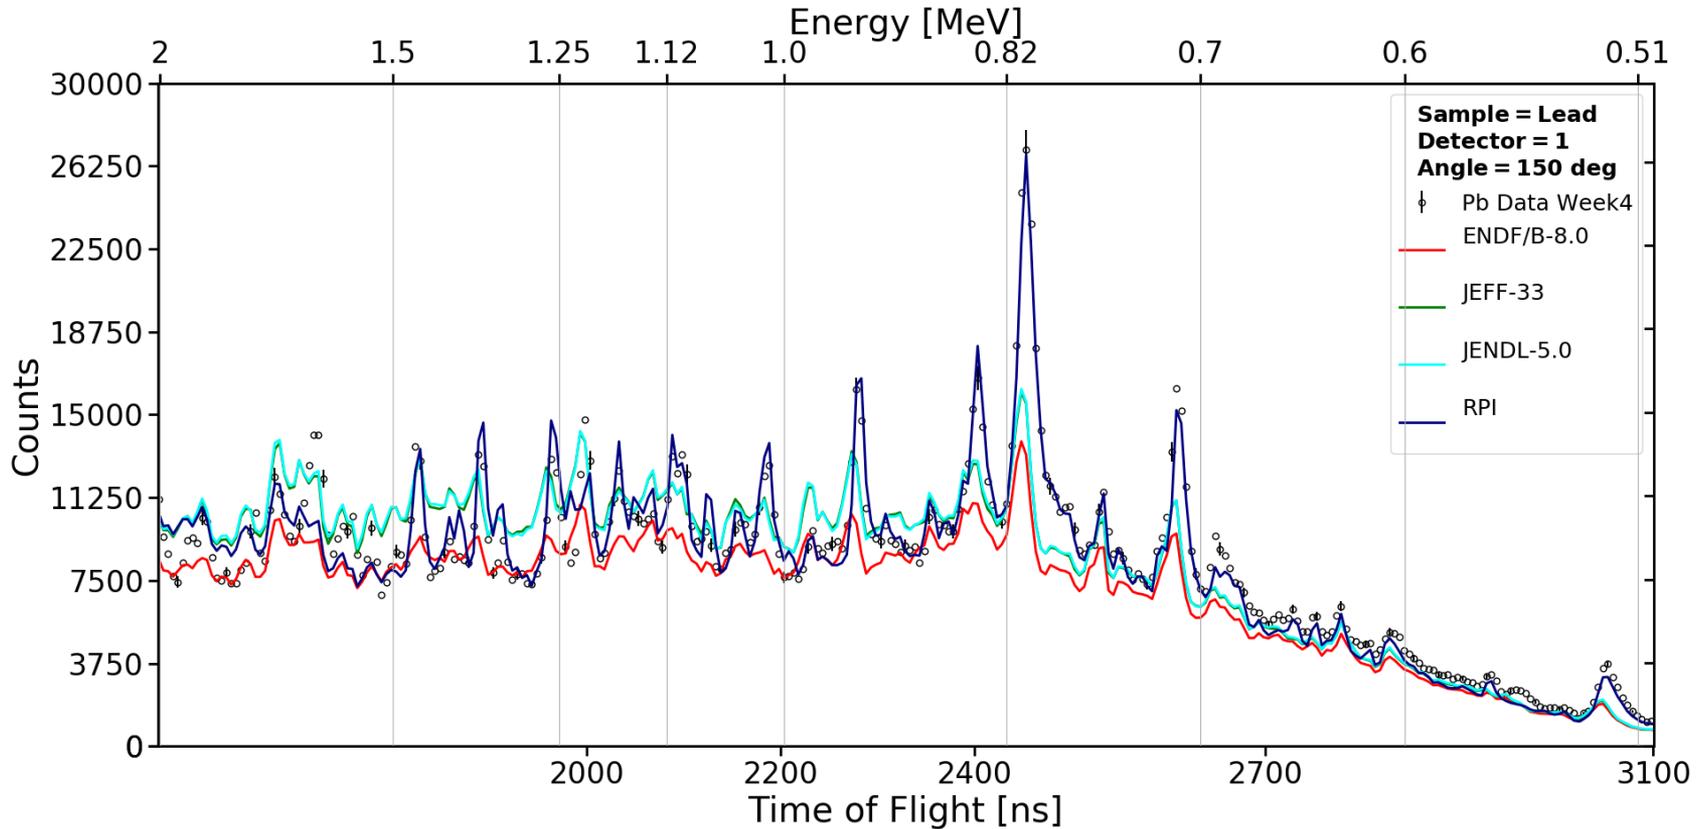

- Expanded on previous evaluations by parameterizing the differential data past 1 MeV using R-matrix theory
- Increased information for angular momenta of resonances
- Validate spin assignments of resonance with RPI Quasi-Differential Scattering while fitting transmission in SAMMY

R-Matrix Parameterized Cross Section RRR extended 1.0 \rightarrow 1.5 MeV

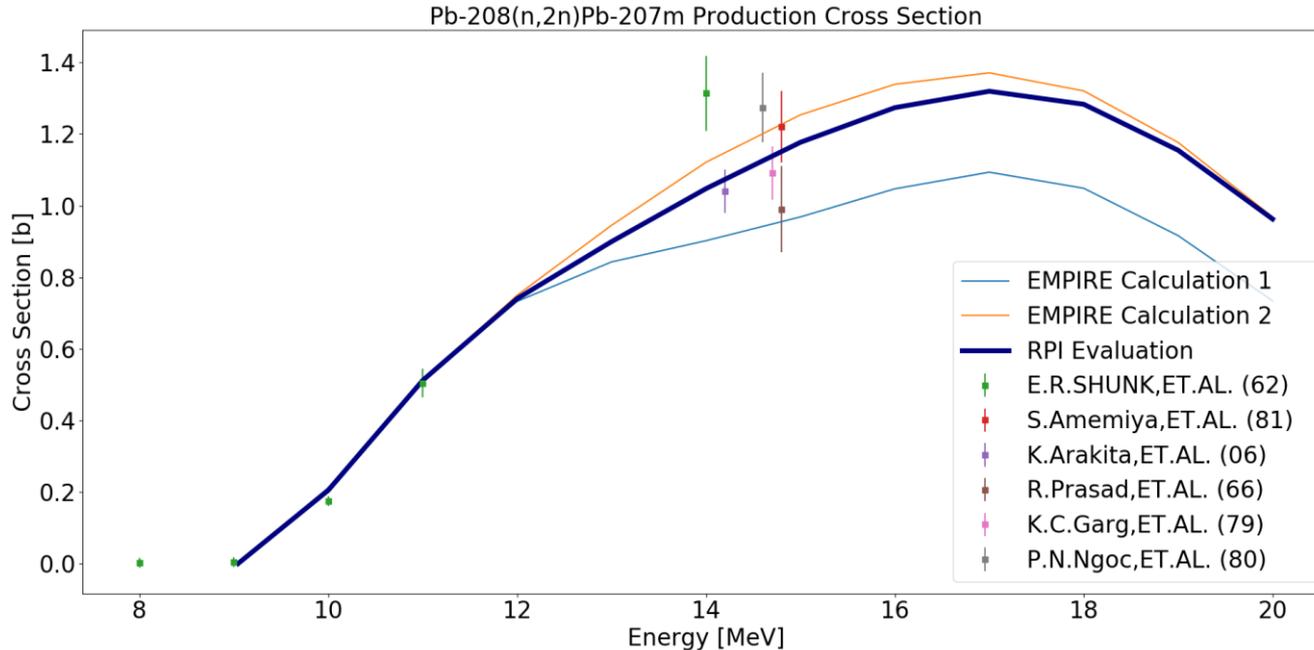

RPI Scattering Simulations

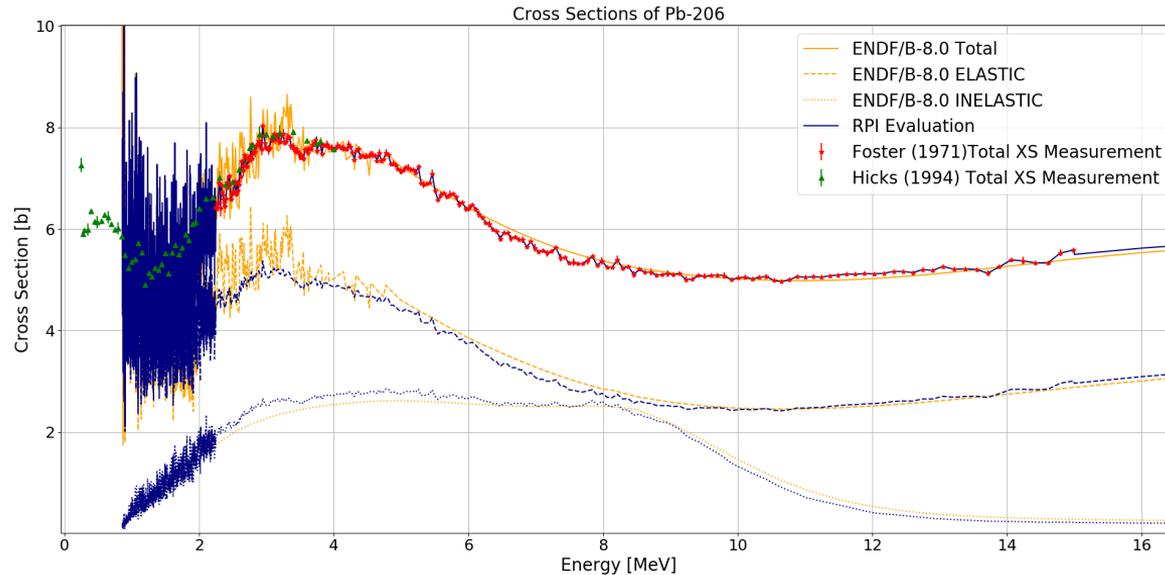

Pb-208 Fast Region Evaluation

- Assisted SNL with Pb-208(n,2n) 207m production, using EMPIRE the ENDF files were produced for SNL
- Unfortunately, needed to use tally multipliers in MCNP as MF10 isn't supported in ACE

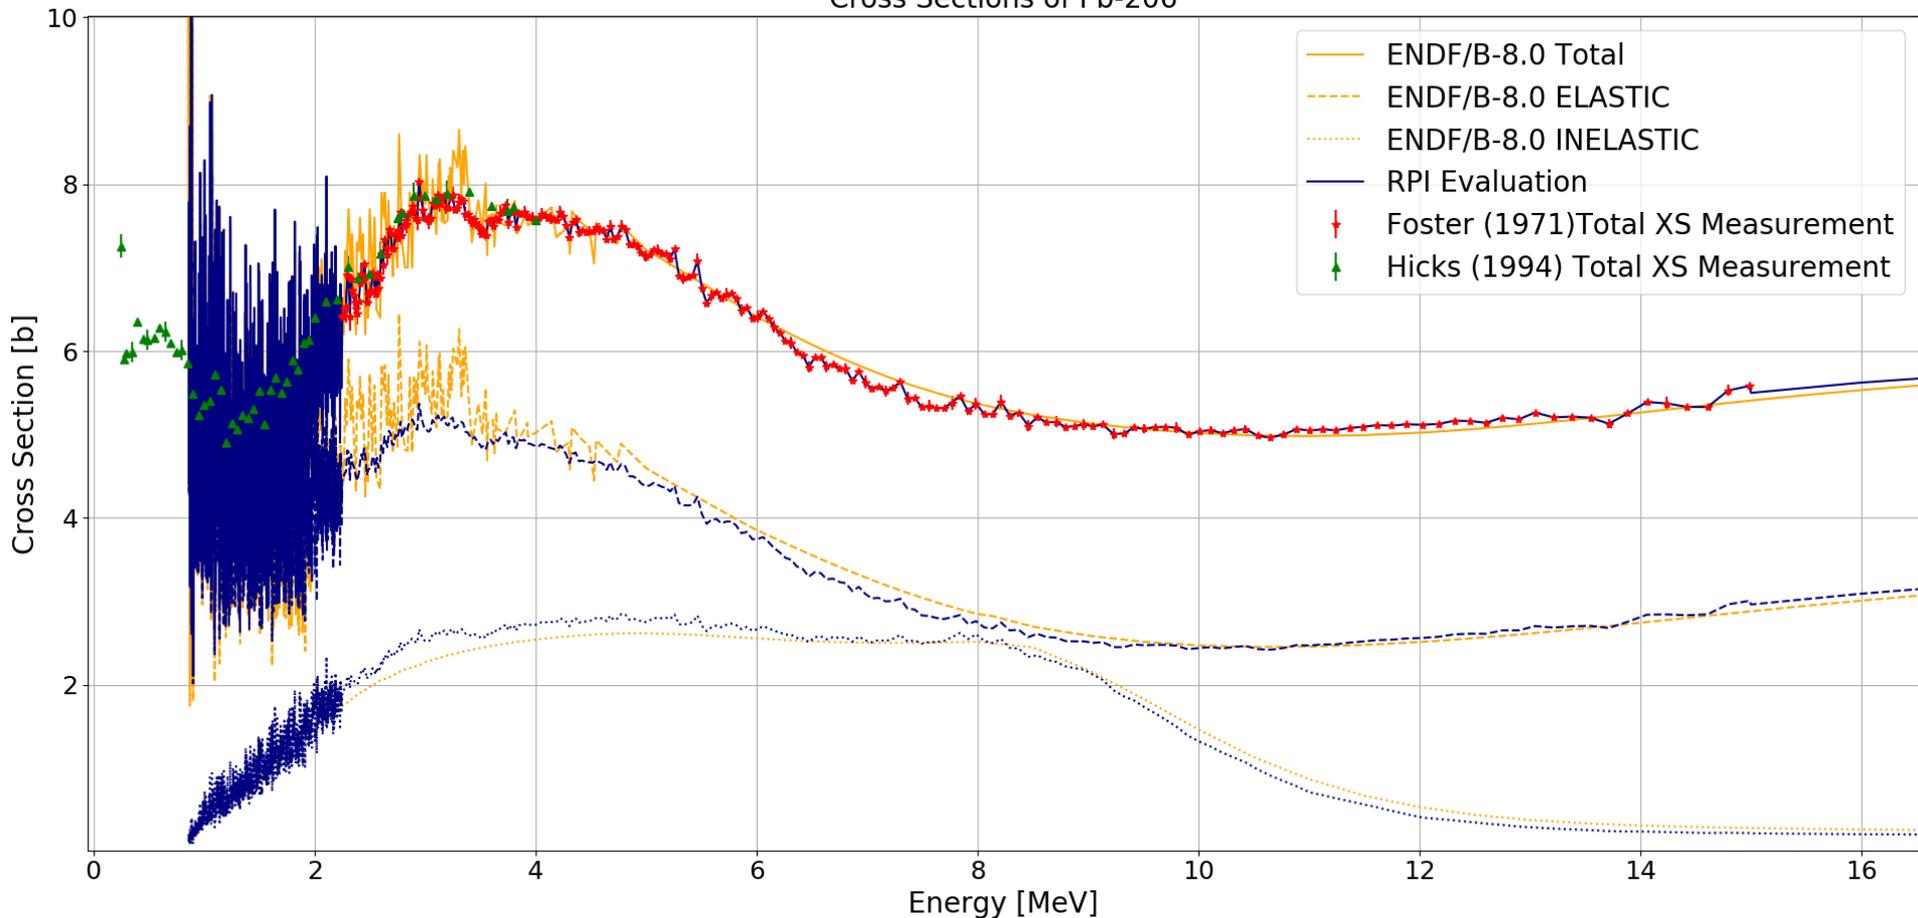

Pb-206 Fast Region Evaluation

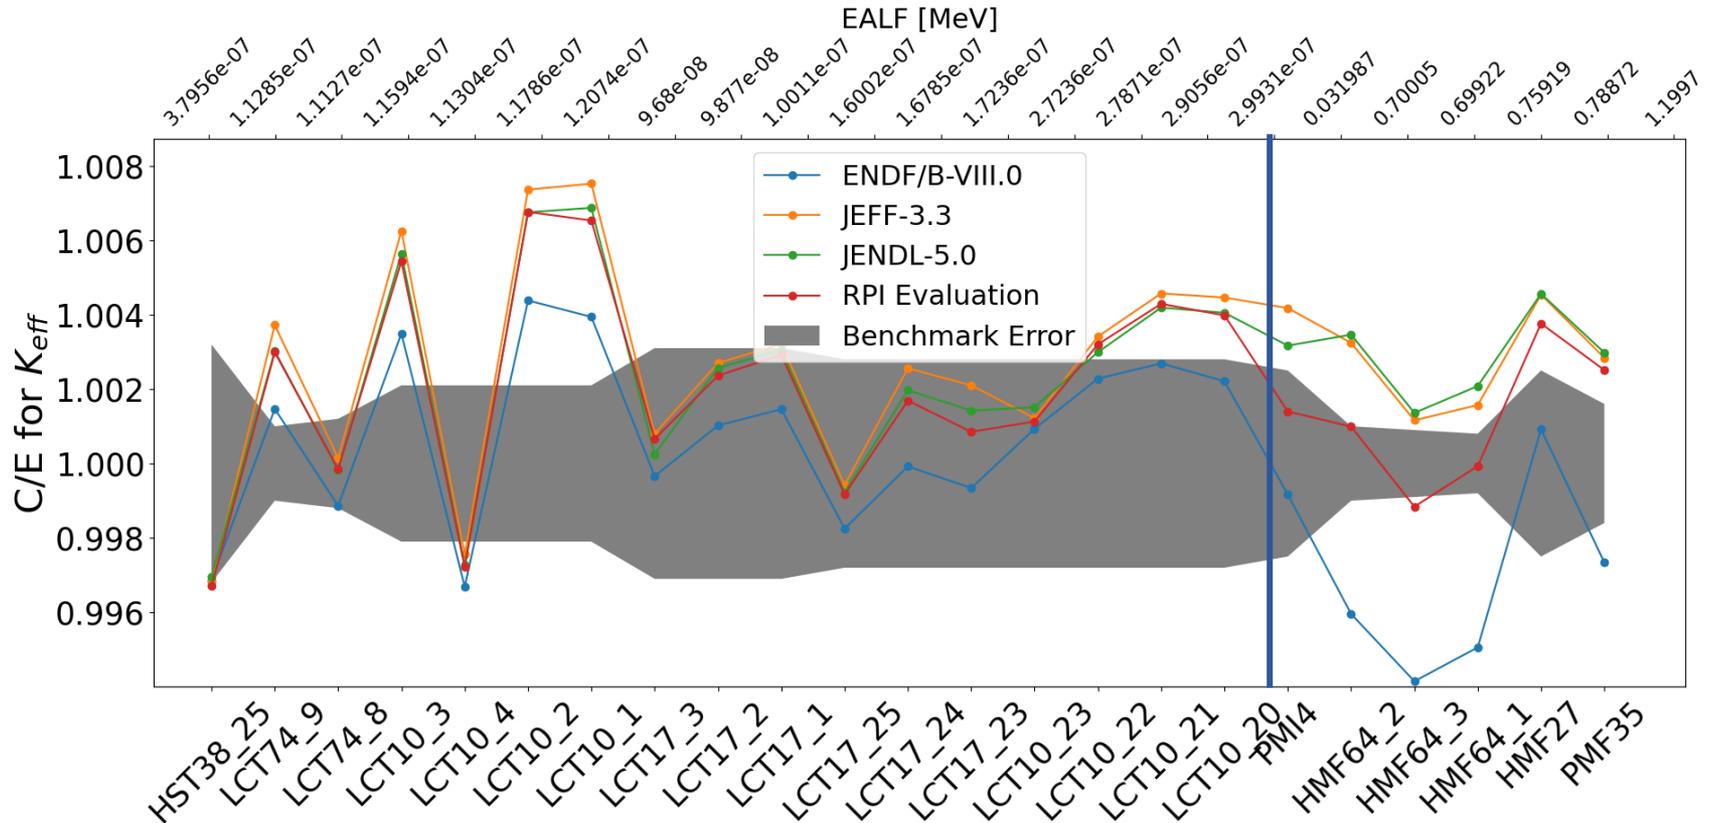

- Reformatted the Pb-206 cross sections with more physically accurate presentation
- Removed legacy structure from natural lead measurement preserved in ENDF/B-VIII.0's Pb-206

Cross Sections of Pb-206

BENCHMARK PERFORMANCE

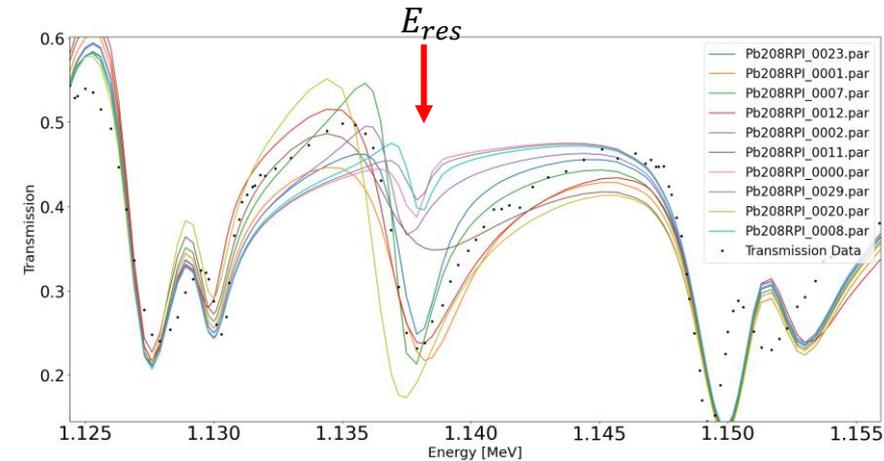

FY-22 SUMMARY AND FUTURE WORK

- **FY-22 Summary**
 - Extended RRR for Pb-208 using new methodology with spin validation from Quasi-differential scattering
 - Pb-208 cross sections finished with collaboration from T. Kawano, (n,2n) reaction updated for isomeric production per SNLs' request
 - Pb-206 cross sections finished with reformatted inelastic cross sections
 - Improved predictive capabilities of fast critical assemblies and RPI scattering experiments
- **Future Work**
 - Covariance update for **MF-32**, MF-33, and **MF-34**
 - Pb-207 fast region cross sections

Rensselaer

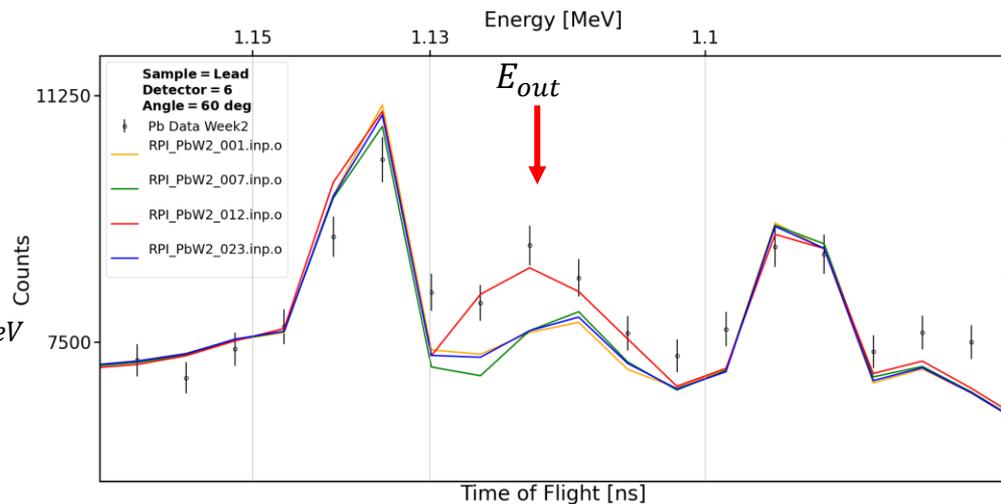

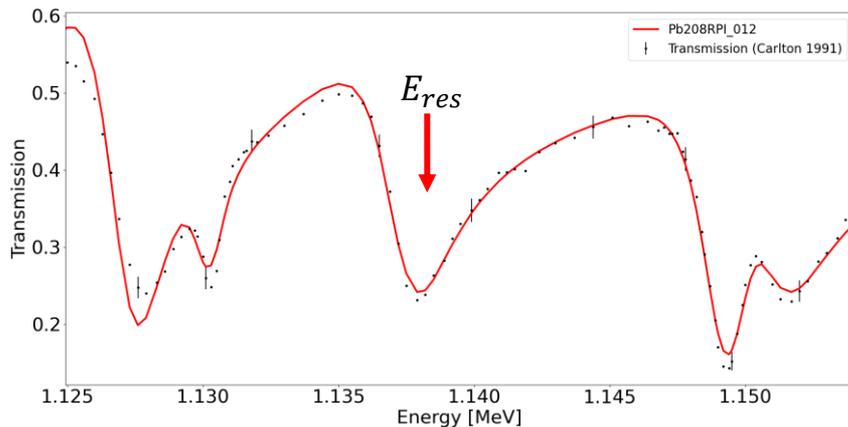

why not change the world?®

1. Generate and fit all available angular momenta (spin assignments) for 3 decades worth of Γ_n , have SAMMY fit both E and Γ_n , Γ_γ assumed constant

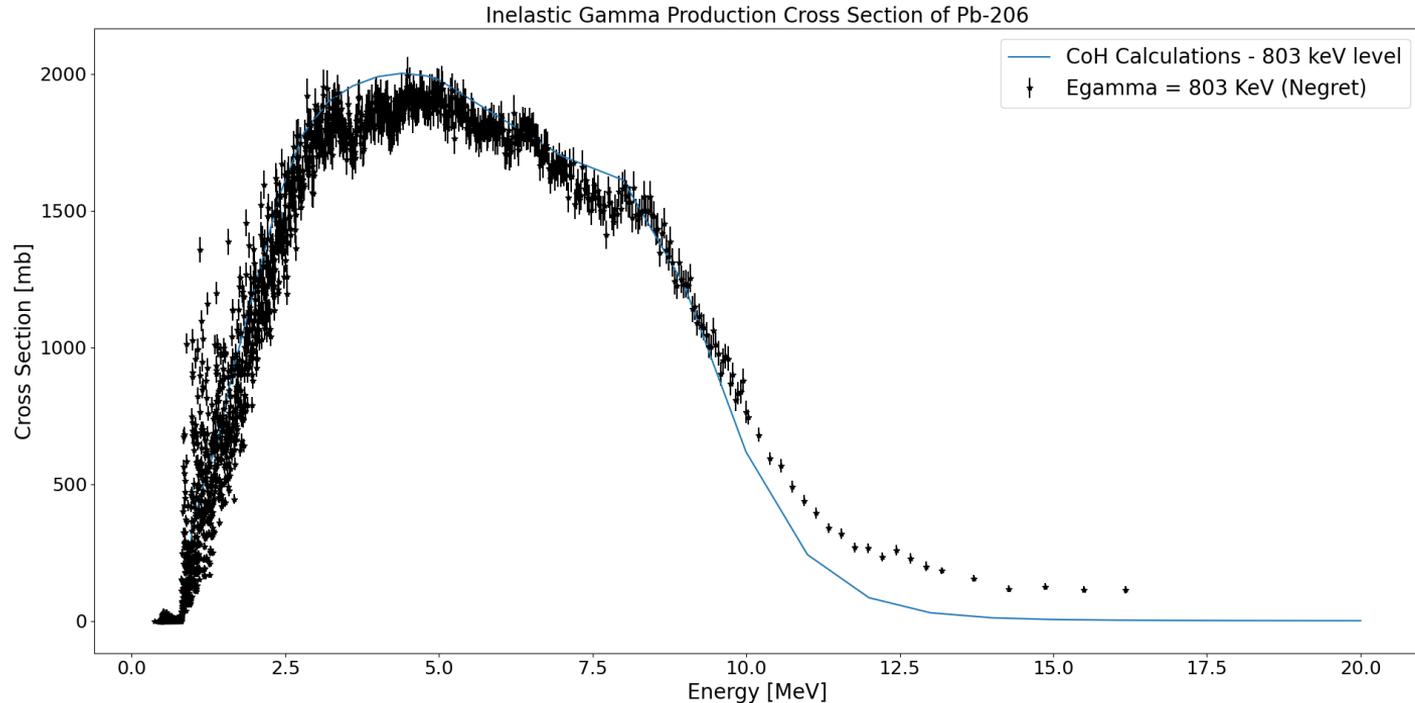

2. Run scattering simulations using resonance parameters derived scattering cross sections

$$E_{out} = E_{res} \left(1 - \frac{4A}{(1+A)^2} \cos^2(\theta) \right) \quad E_{out}(1.137 \text{ MeV}, 60^\circ) = 1.116 \text{ MeV}$$

3. Pick spin assignment and resonance parameters which match transmission and scattering simulations the best

Inelastic Gamma Production from 1st Level of Pb-206(n,n')

- Data from Negret (GELINA) show structure on first inelastic state, need to apply resonances structure to inelastic states.
